

PRODUCT

WATER TREATMENT SYSTEMS**GROUND WATER TREATMENT****PURPOSE**

Clearmake ground water treatment systems treat contaminated ground water to a level suitable for discharge to the environment, protecting the environment from contaminants found in the ground water. Clearmake systems are compliant with local Council and DERM regulations.

**APPLICATIONS**

Any application that needs to permanently or temporarily treat contaminated ground water for discharge to the environment. Examples include:

- Road and rail tunnels
- Construction sites
- Underground car parks

SPECIFICATIONS**Design and Manufacture**

Clearmake ground water treatment systems are custom designed and manufactured in Australia to suit your particular contaminants and treated water requirements, ensuring the most cost effective and efficient solution for your application. The small to medium sized systems are skid mounted and pre commissioned in our factory to minimise installation time and maximise product quality.

Treatment Rates

Systems can treat a wide range of flow rates from 30 l per hour through to more than 100,000 l per hour.

Control System

All systems can be fully automated to minimise operator involvement and ensure reliable high quality results. Systems can also be designed and manufactured to comply with the intrinsically safe requirements of hazardous areas.
