

PRODUCT **STORM WATER MANAGEMENT**  
 DIVERSION SYSTEMS

## PURPOSE

Clearmake diversion systems automatically divert wash down and first flush water from hardstand areas to pre treatment (prior to discharge to sewer). Clean storm water is allowed to flow to the storm water system. Systems are compliant with DERM (EPA), AQIS & OH&S regulations. Clearmake storm water diversion systems are also **Level 2 Watermarked** to comply with your local council discharge requirements.

## APPLICATIONS

Examples include:

- Vehicle wash down bays
- Hardstand areas
- External bunded storage areas
- Fuel or chemical storage areas
- Service stations
- Mining and heavy equipment workshops

## SPECIFICATIONS

### Design and Manufacture

Clearmake diversion systems use butterfly valves for maximum reliability and are pre-assembled into in-ground pits ready for easy installation.

### Treatment Rates

All treatment rates can be catered for.

### Control Systems

Clearmake diversion systems are automatically PLC controlled. First flush diversion, wash down shut down and many other variants available. The systems can be hydraulically, pneumatically or electrically actuated. All control systems can be designed and manufactured to meet intrinsically safe standards for hazardous areas.
