

PRODUCT

QUICK BREAK DETERGENTS & DEGREASERS

To ensure optimal performance of your water treatment or recycling system we recommend you use only Clearmake Quick Break detergents and degreasers.

PURPOSE

After temporarily emulsifying oil and dirt into the wash down water during the cleaning process, Quick Break detergents and degreasers separate the oil and dirt from the clean water following the wash down process. More than 90% of the oil rises to the surface within 30 minutes of wash down. The oil is then easily separated from the clean water in a collection pit or oil / water separator.

**APPLICATIONS**

Use of the right Quick Break products significantly improves the efficiency, reducing the operational cost, of your water treatment or recycling system.

SPECIFICATIONS

With no recognised standard for the use of the term 'Quick Break', some Quick Breaks do not actually break and some do break effectively but are not effective cleaners or use environmentally harmful chemicals. Clearmake Quick Break detergents and degreasers are specifically formulated for use with water treatment and recycling equipment and have been developed to maximise overall system performance and efficiency. They:

- Are specifically formulated to have an effective quick break action to maintain equipment performance and environmental compliance
- Provide superior cleaning power
- Are fully biodegradable and environmentally friendly
- Are **Green Stamp** approved

**Products**

Green Machine – water based vehicle wash

Gold Nugget – water based heavy equipment wash
